Our Racking System

We'll Meet Your Storage Needs

Racking System

Slotted Angle Rack

Description :

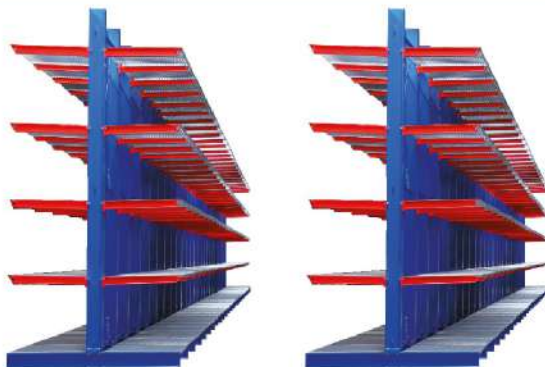

Slotted Angle Racking is a system of reusable metal strips used to construct shelving, frames, work benches, equipment stands and other structures. The name derives, first, from the use of elongated slots punched into the metal at uniform intervals to enable assembly of structures fixed with nuts and bolts, and second, from the longitudinal folding of the metal strips to form a right angle.

Pallet Racking

Description :

1. Durable & precision engineered
2. having smooth edges & efficient storage capacity
3. Direct access to every pallet
4. Pallet can be removed without moving others
5. make stock control easy.
6. adaptable for any size
7. offers high levels of storage density

Cantilever Racking

Description :

Components -

1. upright
2. beams
3. Bracings
4. frame protector
5. pallet

Our Racking System

Time to overcome with your storage trouble

Long Span Racking System

Description :

- Long span shelving racks can store medium to heavy loads
- Adjustable load levels
- A wide range of components adaptable to your needs
- Easily configurable to meet your load volume, weight and handling requirements

Double Deep Racking System

Description :

Double Deep Pallet Racking is a storage system that is halfway between adjustable pallet racking systems and compact storage systems. In this system, the pallets are stored at two depths, thus achieving higher storage density, while access to the pallets remains simple and relatively quick.

Selective Pallet Racking System

Description :

- Increased storage capacity
- Increased inventory management ease
- Decreased product transport time
- Compatible with most standard forklifts
- Design allows for easy reconfiguration to suit specific products
- Relatively low cost

Our Racking System

For your Maximum Storage
in Minimum Space

Multi-tier rack

Features:

Multi-tier Racking designed for warehouses with limited floor areas but available height, are manual storage solutions that maximize warehouse space. They offer an optimum use of height with the creation of different levels of manual loading aisles at different heights accessible by stairs

Gravity flow rack

Features:

low racking systems consist of two main components: framework (Vertical frames, Shelf Frames, Sway Braces) and roller tracks.

1. unique flow design that uses gravity to roll cartons to front for easy access.
2. Load inventory and ease stock picking by loading cartons from the back to ensure first in is first out stock rotation.
3. Cartons are transported using roller tracks that are made with U-shaped galvanized steel channels ...

Compactor Rack

Features -

1. Anti tilt & cost effective
2. central locking & safe locking
3. accidental movement is prevented
4. powder/epoxy coated
5. adjustable shelves
6. space saving
7. customised design
8. heavy duty durable racks
9. manual & mechanical systems both are provided

Our Racking System

Smart Racking for Smarter Warehouses.

Industrial Lockers

An industrial locker is a heavy-duty, robust storage unit made from durable materials like steel designed for tough environments such as factories, warehouses and workshops to securely store tools, equipment, safety gear and personal items.

Key features include sturdy construction, secure locking mechanisms, ventilation, and often a powder-coated finish for protection, offering customizable configurations for efficient organization in demanding industrial settings.

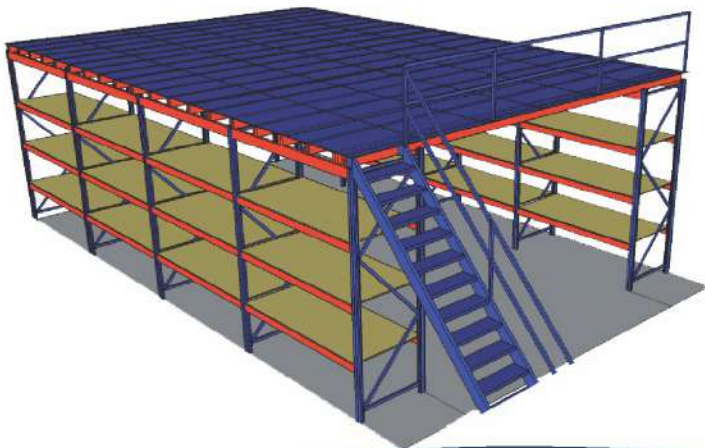

Drive-in Racking

Features:

low racking systems consist of two main components: framework (Vertical frames, Shelf Frames, Sway Braces) and roller tracks.

1. unique flow design that uses gravity to roll cartons to front for easy access.
2. Load inventory and ease stock picking by loading cartons from the back to ensure first in is first out stock rotation.
3. Cartons are transported using roller tracks that are made with U-shaped galvanized steel channels ...

Racking Support Mezzanine Floor

Features -

1. Anti tilt & cost effective
2. central locking & safe locking
3. accidental movement is prevented
4. powder/epoxy coated
5. adjustable shelves
6. space saving
7. customised design
8. heavy duty durable racks
9. manual & mechanical systems both are provided

Our Racking System

Racks That Move Your Business Forward.

Drum Storage Rack

A drum storage pallet rack is a racking system designed to store and organize drums, typically made of steel for durability. These racks improve warehouse safety by preventing spills and damage, and they optimize space by allowing for vertical stacking. They are ideal for industries that handle chemicals, oils, and other liquid products and can be customized for different drum sizes and configurations, sometimes including features for dispensing.

Mold & Fixture Rack

A mould and fixture rack is a heavy-duty, industrial storage system specifically designed to organize and protect heavy, often high-value, tools like moulds, dies, jigs, and fixtures. This type of rack is essential for tool rooms, manufacturing plants, and injection moulding units where tooling needs to be stored safely and accessed efficiently.

Hardware Storage Rack

A warehouse rack for bins is a storage system, often made of steel or wire, that holds modular plastic or metal bins for organizing and storing small to medium-sized items. These racks can be stackable, wall-mounted, or part of a larger shelving system, designed to maximize vertical space for efficient inventory management, with features like large labels for easy identification.

Our Racking System

Time to overcome with your storage trouble

SS 304 Slotted angle rack

An SS304 slotted angle rack is a customizable, durable shelving system made from corrosion-resistant stainless steel (Grade 304), featuring slotted vertical angles and horizontal shelves that allow for easy, tool-free height adjustment, making it ideal for hygienic environments like hospitals, labs, and food industries where cleanliness and rust resistance are crucial for storing various items from light to medium loads.

Slotted Angles / Shelves / Adjustability

SS 304 Long span rack

An SS304 Long Span Rack is a durable, rust-resistant storage solution made from SS304 stainless steel, offering adjustable shelves for medium to heavy non-palletized items like cartons, parts, or tools, bridging the gap between light shelving and heavy pallet racks with its open design for easy manual access, excellent for humid or hygienic environments like food processing, labs and clean rooms.

Vertical Uprights / Horizontal Beams / Shelves / Manual Access

SS 304 Pallet rack

SS304 pallet racks are heavy-duty, corrosion-resistant storage systems constructed from high-grade austenitic stainless steel. These racks are specifically designed for environments where strict hygiene standards, resistance to chemical exposure or extreme durability are required such as food processing, pharmaceutical, warehouses, hospitality and laboratories

Our Racking System

Time to overcome with your storage trouble

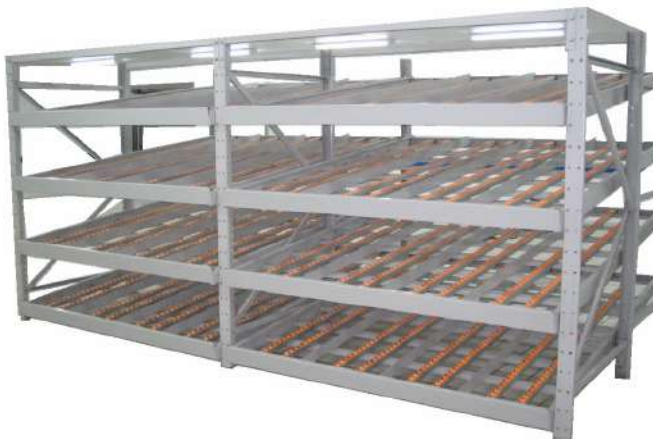

SS 304 Multi tier rack

An SS304 multi-tier rack is a durable, rust-resistant storage unit made from grade 304 stainless steel, featuring multiple shelves (tiers) for organized storage in kitchens, labs, hospitals or industrial settings, offering high hygiene, easy cleaning and corrosion resistance, often with adjustable shelves and designs for specific uses like spices, utensils, or industrial goods.

Design: Multi-tiered (2, 3, 4+ tiers) with open shelves for visibility and air circulation often rectangular.

Pharmaceutical Industry / Food & Beverage / Chemical Laboratories / Hospitality

SS 304 FIFO rack

An SS304 FIFO (First-In-First-Out) rack is a specialized, corrosion-resistant storage solution designed for industries requiring high standards of hygiene and efficient inventory rotation. These racks are inherently rust-proof and suitable for "clean" environments like food processing, pharmaceuticals and cold storage.

These racks typically feature an inclined design. Products are loaded from the higher rear end and automatically slide forward on roller tracks to the front picking face

SS 304 Industrial Lockers

SS304 Industrial Lockers are heavy-duty, corrosion-resistant storage units made from premium grade stainless steel, ideal for humid/wet environments like food processing, pharma, hospitals, and pools, featuring ventilation, strong cam/key locks, sturdy concealed hinges and often elevated legs for easy cleaning, providing durable, hygienic and secure storage for personal belongings or tools in demanding industrial settings
